What is oDoc?

oDoc is a **single HTML file** that lets you open, read, and edit documents — right in your browser. No server required, no sign-up, no data ever leaves your device. Download the file once and use it forever, even offline.

🌟 Features

- **Multi-format support** — Open `.md`, `.txt`, `.html`, `.pdf`, and `.epub` files
 - **Live Markdown preview** — Renders headings, code blocks, tables, blockquotes, and more
 - **Edit mode** — Switch to a raw text editor at any time; edits update the preview in real time
 - **Drag & drop** — Drop files anywhere on the window to open them instantly
 - **Download** — Save edited files back to your device
 - **Dark theme** — Easy on the eyes, always
 - **Zero dependencies at runtime** — Ships with PDF.js and JSZip via CDN; works offline with a local copy
 - **Single file** — The entire app is one `.html` file you can bookmark, share, or self-host
-

🚀 Getting Started

Option 1 — Just open it

Download `oDoc.html` and open it in any modern browser. That's it.

```
bash

# Clone the repo
git clone https://github.com/oDoc/oDoc.git

# Open in your browser
open oDoc/oDoc.html
```

Option 2 — Self-host

Drop `oDoc.html` on any static host (GitHub Pages, Netlify, Vercel, your own server):

```
bash

# GitHub Pages example
git clone https://github.com/oDoc/oDoc.git
cd oDoc
# Push to a gh-pages branch or configure Pages to serve from main
```

Option 3 — Use the live demo

Visit <https://odoc.github.io/oDoc> — no download needed.

Supported Formats

Format	Extension	Notes
Markdown	<code>.md</code> , <code>.markdown</code>	Full preview with GFM-style rendering
Plain text	<code>.txt</code>	Displayed in a monospace editor
HTML	<code>.html</code> , <code>.htm</code>	Sanitized preview (scripts stripped)
PDF	<code>.pdf</code>	Text extraction via PDF.js
EPUB	<code>.epub</code>	Text extraction via JSZip

Unsupported formats (`.docx`, `.csv`, `.psd`, `.zip`, etc.) are intentionally excluded to keep the app focused and secure.

Interface

- **Sidebar** — file list with icons, sizes, and one-click remove
 - **Preview tab** — rendered output (Markdown, HTML) or plain text
 - **Edit tab** — raw text editor; changes sync to preview instantly
 - **Download button** — saves the current (possibly edited) file
 - **Drag & drop** — drop files anywhere to add them
-

Privacy

oDoc processes everything locally in your browser.

- No files are uploaded to any server
 - No analytics or tracking
 - No cookies or local storage used
 - Works fully offline once the page is loaded
-

Development

The entire app lives in a single file — `oDoc.html`. There is no build step.

```
bash

git clone https://github.com/oDoc/oDoc.git
cd oDoc

# Edit the file
code oDoc.html

# Test in browser
open oDoc.html
```

External libraries loaded via CDN (swap for local copies if you need offline-first):

Library	Version	Purpose
<u>PDF.js</u>	3.11.174	PDF text extraction
<u>JSZip</u>	3.10.1	EPUB parsing

Contributing

Contributions are welcome! Please:

1. Fork the repository
2. Create a feature branch (`git checkout -b feature/my-feature`)
3. Commit your changes (`git commit -m 'Add my feature'`)

4. Push to the branch (`git push origin feature/my-feature`)
5. Open a Pull Request
